

SANS “FIND EVIL” HACKATHON

Agent Execution Logs

Find Evil! — Autonomous DFIR Triage Agent

Find Evil! is a single-agent system. Each investigation is one Claude agent invocation (`claude -p`, read-only `dontAsk` mode) over a deterministically collected evidence bundle. The complete agent communication is captured as line-delimited stream-json and saved to `logs/<bundle>.jsonl`. This document renders the structured tool-execution sequence, timestamps, and a finding-to-tool traceability matrix for the two validated cases, so any finding can be traced to the exact tool execution that produced it.

FORMAT

How To Read These Logs

- Single agent — there are no agent-to-agent messages. Each run is one agent invocation.
- Phase 1 — read-only collection: `collect.sh` runs Sleuth Kit tools and writes a small evidence bundle. Phase 2 — analysis: the agent issues Read tool calls over the bundle and reasons. Phase 3 — report.
- Canonical artifact — the raw stream log `logs/<bundle>.jsonl` contains every assistant message, every `tool_use` event, and the final result event (including token usage). Include these files in the submission.

Phase timestamps below are anchored to the bundle-creation epoch (the bundle name is a Unix timestamp) plus reported phase durations; exact per-event timestamps are in the raw stream log. The five Phase-2 reads are issued in parallel at the start of analysis.

CASE 1 · INTRUSION

CFReDS “Mr. Evil” — 4Dell Latitude CPi.E01

Run metadata

Field	Value
Evidence image	/home/ubuntu/Desktop/4Dell Latitude CPi.E01
Volume serial	B26CB1CE6CB18D9B
Bundle	bundle-1781530010
Agent invocation	<code>claude -p --permission-mode dontAsk --max-turns 10 --output-format stream-json</code>
Start (UTC)	2026-06-15 13:26:50
Collection time	3.1 s (read-only)
Total time	82 s
Agent tool calls	5 (Read)
Determined track	INTRUSION (attacker toolkit)
Output tokens	see raw stream log (result event)

Tool execution sequence

#	Time (UTC)	Actor	Tool	Command / Input	Phase
0	13:26:50	collector	bash	collect.sh "4De1l Latitude CPi.E01" bundle-1781530010	Collection
—	13:26:53	system	—	evidence bundle ready (3.1 s)	Collection
1	13:26:53	agent	Read	bundle-1781530010/offset.txt	Analysis
2	13:26:53	agent	Read	bundle-1781530010/fsstat.txt	Analysis
3	13:26:53	agent	Read	bundle-1781530010/indicators.txt	Analysis
4	13:26:53	agent	Read	bundle-1781530010/prefetch.txt	Analysis
5	13:26:53	agent	Read	bundle-1781530010/recycler_info2.txt	Analysis
—	13:28:12	agent	result	severity-ranked report composed (3C / 4H / 2M / 1L)	Report

Traceability — finding → tool execution

Finding	Evidence cited	Bundle file	Read by	Produced by

```

CASE 2 · EXFILTRATION

M57-Jean — nps-2008-jean.E01

Run metadata

Field	Value
Evidence image	/home/ubuntu/Desktop/DigitalCorpora/nps-2008-jean.E01
Volume serial	7E745008744FC21F
Bundle	bundle-1781530289
Agent invocation	claude -p --permission-mode dontAsk --max-turns 10 --output-format stream-json
Start (UTC)	2026-06-15 13:31:29
Collection time	9.4 s (read-only)
Total time	69 s
Agent tool calls	5 (Read)
Determined track	EXFILTRATION (social engineering)
Output tokens	see raw stream log (result event)

Tool execution sequence

#	Time (UTC)	Actor	Tool	Command / Input	Phase
0	13:31:29	collector	bash	collect.sh "nps-2008-jean.E01" bundle-1781530289	Collection
—	13:31:38	system	—	evidence bundle ready (9.4 s)	Collection
1	13:31:38	agent	Read	bundle-1781530289/offset.txt	Analysis
2	13:31:38	agent	Read	bundle-1781530289/fsstat.txt	Analysis
3	13:31:38	agent	Read	bundle-1781530289/indicators.txt	Analysis
4	13:31:38	agent	Read	bundle-1781530289/prefetch.txt	Analysis
5	13:31:38	agent	Read	bundle-1781530289/recycler_info2.txt	Analysis
—	13:32:38	agent	result	severity-ranked report composed (1C / 1H / 1M / 1L)	Report

Traceability — finding → tool execution

Finding	Evidence cited	Bundle file	Read by	Produced by
C1	m57biz.xls inode 32712-128-3 (EXFIL CANDIDATE)	indicators.txt	tool #3	collect.sh (Sleuth Kit fls)
H1	From: alison@m57.biz [mailto:tuckgorge@gmail.com]	indicators.txt	tool #3	collect.sh (email-artifact sweep)
M1	cookies.sqlite 11369 / formhistory.sqlite 11371 / Cache 11372	indicators.txt	tool #3	collect.sh (browser-artifact sweep)
L1	tag-cloud.jpg, Jean\Desktop (deleted)	recycler_info2.txt	tool #5	collect.sh (INFO2 parse)
Header	NTFS, offset 63, volume serial	offset.txt / fsstat.txt	tools #1–2	collect.sh (mmis / fsstat)

Token usage for this run is recorded in the result event of the raw stream log (logs/bundle-1781530289.jsonl). Extract with:

```
grep '"type": "result"' logs/bundle-1781530289.jsonl \
| python3 -c "import sys,json;print(json.loads(sys.stdin.read()).get('usage'))"
```

SUMMARY

Run Summary

Case	Track	Tool calls	Total time	Findings (C/H/M/L)	Bundle
Mr. Evil	INTRUSION	5	82 s	3 / 4 / 2 / 1	bundle-1781530010
M57-Jean	EXFILTRATION	5	69 s	1 / 1 / 1 / 1	bundle-1781530289

Both runs used the same single agent and identical invocation; the agent selected the track from the evidence. Every finding above is traceable to a specific Read tool execution and the collector step that produced the bundle file it cites.
